OUR PRINCIPLES AND VALUES:

A consumer is the central figure in our business and we constantly work to identify their needs and wants and also strive to predict and satisfy their future needs.

System of effective business processes is a guarantee of providing our Clients with products of high quality level.

Our employees are our strategic resource. Management will make every effort to create a, atmosphere where each employee can demonstrate his/her abilities, fully unleash creativity in order to achieve common goals.

The Company management ensures appropriate level of qualifications of employees, encourages education and self-education to improve their qualifications.

Our partners are our allies in achieving goals therefore we build relationships on the basis of mutually beneficial long-term cooperation. Continuous improvement of products and processes based on analysis of customer feedback, results of internal audits and information about new technologies, both in manufacture of products and in management.

Identification of risks and opportunities, implementation of risk management actions to improve effectiveness of the QMS and prevent negative effects.

Top management of the Company is committed to meeting requirements of the quality management system and maintaining it.

MATERIALS

Remede International (Pvt) Ltd manufactures a wide range of products from various non-woven materials, the latest technologies. Use of such clothing can reduce the spread of nosocomial infections and postoperative complications.

Nonwovens:

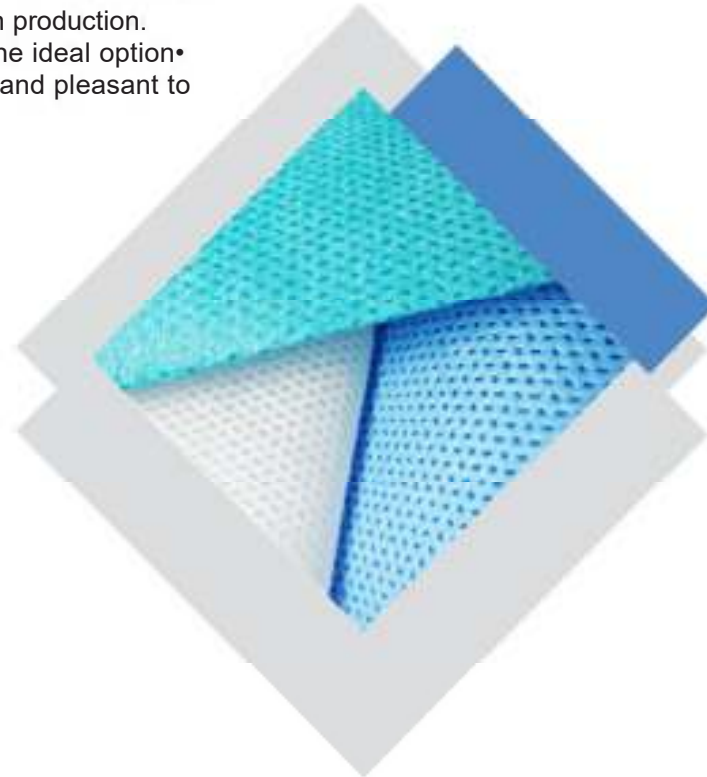

- ◆ Breathe no worse than cotton or flax.
- Absorb moisture and retain it thanks to special fiber structure. Do
- ◆ not cause allergies since no chemicals are used in production.
- Combination of different layers allows to create the ideal option•
water repellent, antibacterial, etc. Soft to touch and pleasant to body.
- Bend easily and give freedom of movement

Spunbond - lightweight material made from endless thermally bonded polypropylene fibers. Main characteristics of Spunbond are its surface density and additional characteristics are: hydrophilicity, hydrophobicity, antistaticity, resistance to UV radiation, strength and resistance to tearing, breathability, softness and lightness, pleasantness in contact with skin

Meltblown - nonwoven fabric obtained from polypropylene microfibers 1-5 microns thick by blowing.

Basic qualities:

Due to thickness of fibers, meltblown has significant advantages over traditional nonwovens. These include greatly increased uniformity, both visual and physical, better coverage per surface unit, increased or complete water permeability with simultaneous breathability and high filtration properties. Meltblown has significant filtration, absorption and isolation effects. This material has increased hydrophilic and barrier properties in relation to penetration of microorganisms, fungi, which allows it to be used as a filter layer in surgical masks, respirators. Meltblown has been successfully used in vacuum cleaner filters, respirators, industrial masks, filters for filtering liquids and even gases

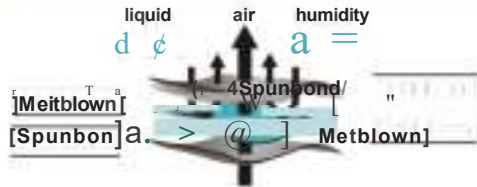

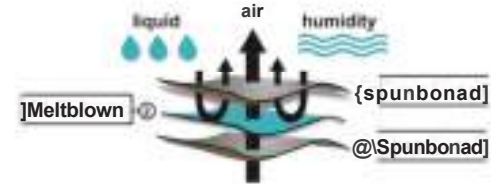

Series of products manufactured by type of nonwoven fabric:

Series - Budget (SMS) density 28g/ m²

Budget - Three-layer, light weight, non-woven material with properties necessary for medical products - air permeability, strength, biological inertness, in addition, it does not absorb moisture and prevents penetration of various bacteria.

Series - Standard (SMS) density 40g/ m²

Standard - Three-layer nonwoven fabric SMS (spunbond-meltblown-spunbond) It has small thickness and density of material and properties necessary for medical devices - air permeability, strength, biological inertness. Spunbond plays a reinforcing role, intermediate layer of meltblown material has high barrier properties, in addition, it does not absorb moisture and prevents penetration of various bacteria.

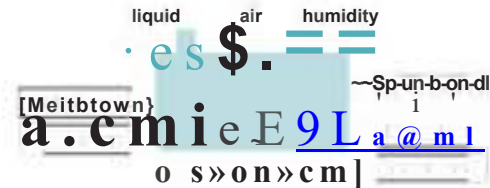

Series - Comfort (SMMS) pl. 40g/ m²

Comfort - Four-layer non-woven fabric (spunbond-meltblown-meltblown-spunbond). Spunbond plays a reinforcing role, the double intermediate layer of meltblown material has high barrier properties, in addition, it does not absorb moisture and prevents penetration of various bacteria.

Series - Luxe

Luxe - materials of class luxe (SMMS, Spunlace, Sunteys, Fibrella, Medicae, Softes, Wooldelpul, etc.) Innovative materials provide a high level of protection and comfort without hindering freedom of movement. It has excellent barrier properties and guarantees a high level of protection. Quickly removes heat from body, keeping cool and comfortable. Exceeds requirements of the European standard EN 13795 for water permeability, lint release, tear and burst resistance.

Laminated nonwovens

Laminated nonwovens (Laminated Spunbond, Laminated Spunlace, Medispan, Medics, etc.) are most often two- or three-layer. Spunlace, spunbond, paper, etc. are used as a base. A thin layer of molten polymer (polyethylene or polypropylene) is applied to them using special equipment.

ANGIOGRAPHY & ANGIOPLASTY

DRAPE

Remede Angiography / Angioplasty Pack is ideal for angiography procedures where a significant quantity of fluid needs to be controlled.

Remede drape collection features top-of-the-line three-layer fabric for high barrier strength, fluid control and patient comfort. Made from a trilaminate of two outer layers of polypropylene and one inner layer of impervious polyethylene film, the Ultimate fabric offers high-level fluid resistance, softness and drape ability. An additional polypropylene reinforcement will enhance fluid absorption capacity around the surgical area.
